Carm Pedro

Surveyed and photographed this cave, found last Easter

13 Feb

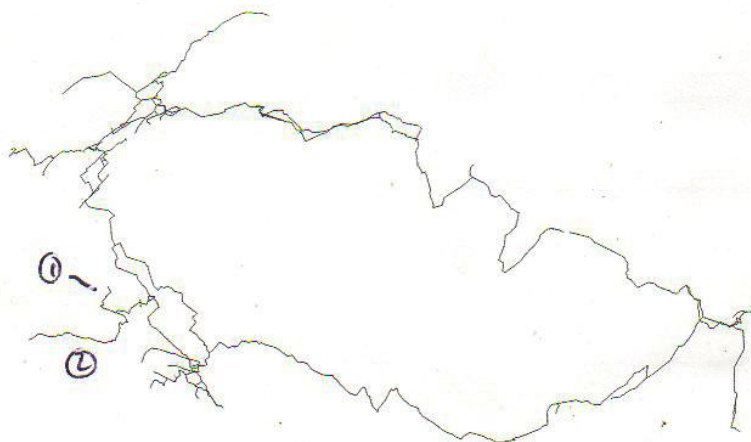

Cobaded - Evidence Oxbow Series, Carm, Pedro

First objective was to explore crawl at end of the series. This only continued for about 30m through very small passage to where it became too tight with a boulder blocking the way. We then went to inlet passage on southern side of Oxbow series. This continued for about 40m upstream through rift passages just above stream level to a small chamber. The passage continued going west, with a flowstone floor. At the end the passage got lower with a mud floor. Carm dug through a restriction but the passage soon ended. From the chamber, the stream could only be followed for a short distance (unsurveyed).

It was raining while we were underground and the water level was rising in the entrance series (although this caused no problems). A large stream was entering at the end of Pinnacle Passage.

① 34.3m surveyed

② 187.5m surveyed

16/2/05 Juan + Penny walked up to Hoya de Yusa (in the snow). Because we approached the col near 116 a little high, we came across site 2165 - a 10m deep shift - against a cliff.

18/2/05 J + P - parked at top of steep section of Cubija trail and 'walked' along at Mat level to Lora-Lenion (155) - GPS. Then up to Cuera Roja (1238) - GPS and had a look in. Very warm and grass @ end completely under water. Up to Rascaveja. - GPS
