

EXPLORATION AREA & CAVES

WATER TRACING SUMMARY

The straight line arrows show the injection points and where the agent was detected, rather than (in some cases) the passages where the agent and stream runs. For example, in trace BO-01, the dye was injected at the Astradome and would have passed through Rocky Horror into Cueva Llueva before resurging at Los Boyones. By no means are all resurgences highlighted - just the ones where the tracing agent was detected.
